Vitrified Compact
Surfaces (VCS)

A 0% Crystalline Silica Product

Redefining Decorative Surfaces

Zenith emerges as a paradigm shift in surface materials, leveraging a ground-breaking **Vitrified Compact Surface (VCS) technology**.

Composed of up to 89% recycled glass, Zenith transcends conventional limitations, boasting exceptional strength, durability, scratch resistance, and heat resistance.

Zenith is redefining the way Australian's design and create with a new category of surfaces that is sure to impress with its array of styles and designs, suitable for any space you can imagine.

The VCS Advantage

Vitrification

A meticulous process partially transforms the core material into a non-crystalline, amorphous glass-like structure. Translating to unparalleled robustness, exceeding the performance of traditional surface materials.

0% Crystalline Silica

Zenith's vitrification ensures a 0% crystalline silica content, exceeding safety standards and promoting healthy workplaces.

Sustainability Is Key

Zenith champions sustainability by incorporating up to 89% post-consumer recycled glass, minimizing environmental impact and promoting resource conservation.

Exceptional Performance

Zenith exhibits phenomenal compressive and flexural strength, exceeding granite and marble benchmarks.

Its imperviousness to scratches and stains simplifies maintenance, while its impressive thermal resistance renders it impervious to everyday kitchen heat.

The Fabrication Process

Zenith demonstrates seamless integration into existing fabrication processes, exhibiting exceptional compatibility with industry-standard tools and techniques.

Its performance characteristics align with, or even surpass, those of prevalent materials in its class, ensuring a smooth transition for fabricators and end-users.

Designed in Australia

All Zenith Surfaces are proudly designed right here in Australia by our R&D team that meticulously plans and develops new designs based on the needs of the Australian retail, trade and design sectors.

This ensure designs that are functional, yet affordable and suitable for all styles and budgets.

Introducing Zenith Surfaces by Stone Ambassador, a revolutionary new surface material containing a **0% crystalline silica formulation.**

Up to 89%
recycled materials

Zero **Crystalline Silica**

High durability

Stain resistance

Scratch resistance

Designed in Australia

Discover how the beauty of natural minerals and glass fuse together to create a surface with absolute consistency, feel, look and design as the current Stone Ambassador range.

All surfaces come in jumbo 3200mm x 1600mm slab sizing and covered by a 10 year limited warranty.

No change to fabrication

Heat resistance

10 year warranty included

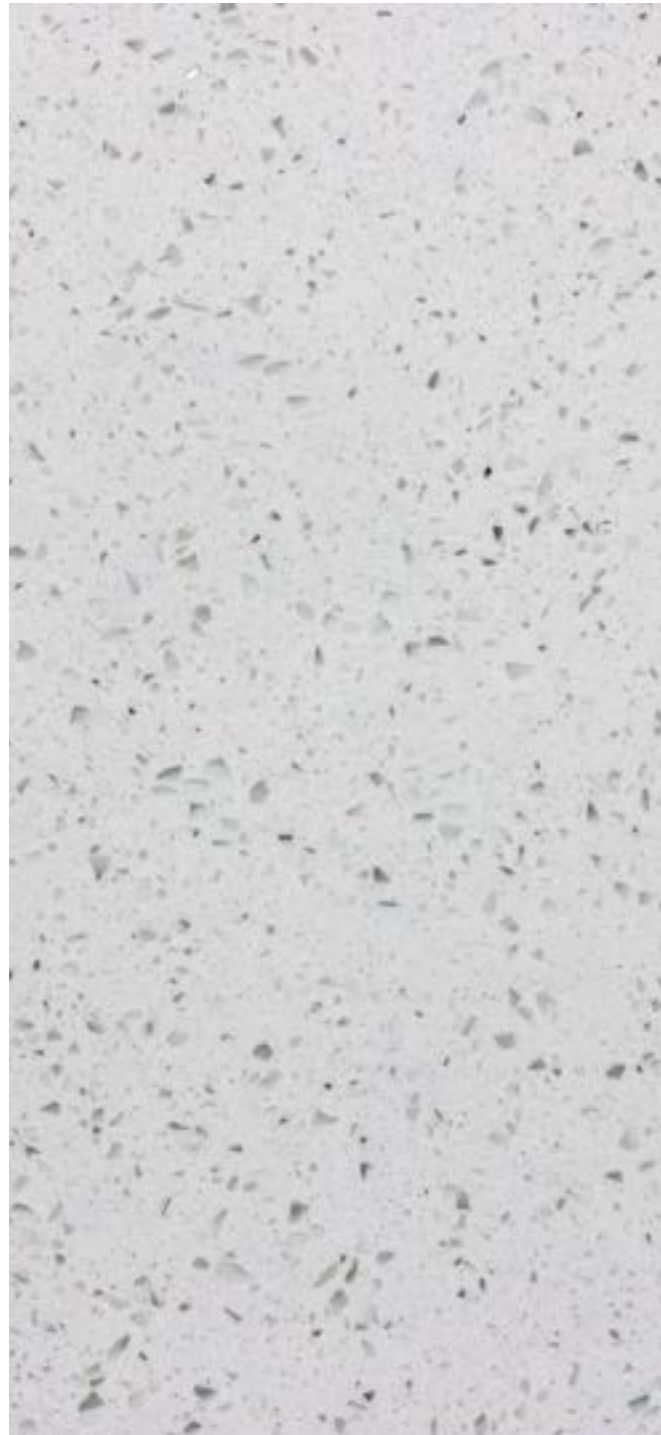

Up to 89% recycled materials
